

Basic paediatric stoma care guidelines: babies

As a part of their ongoing commitment to supporting healthcare professionals and improving the quality of life for neonates with a stoma and their families, the Global Paediatric Stoma Nurses Advisory Board (GPSNAB) has developed a one-pager on neonate stoma care.

This one-pager is intended for nurses and other healthcare professionals working with babies. It provides an overview of basic stoma care guidelines for this patient group – including topics such as peristomal skin care, pouch application and discharge information.

We hope you will find the attached one-pager useful in your work with babies with stomas. For more in-depth information, please consult Paediatric stoma care. Global best practice guidelines for neonates, children and teenagers, available at [Coloplast Professional](#).
